Jantore Suleimenov

Product Engineer — websites and the systems behind them

Almaty, Kazakhstan · Remote, US hours · zhantoresuleimen@gmail.com · jansuleimenov.com · github.com/jansuleimenov · linkedin.com/in/jantore-suleimenov

SUMMARY

Product engineer. I design and build websites and the systems behind them: lead pipelines, dashboards, data warehouses and automations, with AI where it earns its place. I sit with the client, find the real problem, ship it and keep it running. English and Russian.

EXPERIENCE

COO — opengate (AI and software firm, Almaty) Sep 2025 – now

- Built opengate Command: an MCP server with about 27 tools and one screen per role, over a PostgreSQL CRM, a people register of 126 applications, a 130-document knowledge base and 11 automations.
- Designed and built opengate F&B, a product that shows restaurant and bar owners tonight's sales, stock, supplier prices and staff on one screen.
- Design and build of the opengate company website: 32 pages in English and Russian, 5 product pages, 3 service pages and 3 case studies, with an articles section the team publishes to itself.
- Own client delivery, proposals and tenders, contractor management and the intern program.

Data engineer (contract) — a high-volume online brand Mar – May 2026

- Migrated automation to self-hosted n8n and built a PostgreSQL warehouse on Azure (5 schemas, 59 tables, ~10 GB).
- Nightly pipelines from email (~1.27M profiles, 25 metrics), web analytics and ad data (84K rows).
- LLM-written daily and weekly briefings for the CEO and COO, a chat agent over the warehouse, error logging and data-freshness checks.
- Found $104K of revenue hidden from reports by a LIMIT 100 in an existing query.

Freelance — automation and web systems Dec 2024 – now

- Designed and built a gallery website in 3 languages for tapestry artist Batima Zaurbekova: 76 works, Kazakh, Russian and English, an image pipeline from the catalogue spreadsheet; the artist's team later moved it to their own platform (batima.art).
- Built and launched the website and lead system for OpenWave, a Maine company, in 12 days: lead pipeline to Google Sheets, Telegram and email, CI with unit and end-to-end tests on every pull request, local SEO.

SKILLS

TypeScript, Next.js, React, PostgreSQL, SQL, n8n, Model Context Protocol, Claude Code, LLM prompting and evaluation, REST APIs, Vercel, Cloudflare Workers, GitHub Actions, Playwright.

EDUCATION

BA, Communication — LCC International University, Lithuania 2024
